

NEW STRAINS ON OUR WASTEWATER SYSTEM

Clogged Pipes & Increased Chemical Use

Increasingly, people are using more and more household products to keep their homes looking and smelling nice. However, proper disposal of cleaning products must be maintained for our water treatment system.

There are two main factors contributing to the increased use of household products through the wastewater pipe by clogging and through the wastewater treatment process by chemicals.

CLOGGED PIPES

Flushing and disinfecting pipes throughout the District Area is the order. This is an annual cycle of repairs to the wastewater system for clogged pipes. With the new people flushing pipes, chemicals in the pipes, sewage pumps and maintenance programs that are in place. There is a lot of flushing and chemicals used. These chemicals are used, however, they are not used through the sewer, and they are not used through the sewer.

DISCARD WIPES AND PAPER TOWELS IN THE TRASH

Wipes, towels, napkins, and paper towels should not be flushed down the toilet. These items can clog the sewer system and cause problems.

The only things that should go down your toilet are human waste and toilet paper. The rest of the items that are in your home should not be flushed down the toilet.

INCREASED USE OF DISINFECTANTS

The process of flushing a wastewater system includes using/adding chemicals to the water. These chemicals are used to disinfect the wastewater. The amount of chemicals used is not too high, but it is not too low. The amount of chemicals used is not too high, but it is not too low. The amount of chemicals used is not too high, but it is not too low.

Disinfectants that are used to disinfect the water can also be used to disinfect the water. The amount of chemicals used is not too high, but it is not too low. The amount of chemicals used is not too high, but it is not too low. The amount of chemicals used is not too high, but it is not too low.

BE GRABBY ABOUT YOUR USAGE

Be grabby about your usage. Water can be used for many things and it can be used for many things. It can be used for many things and it can be used for many things. It can be used for many things and it can be used for many things.

Be grabby about your usage. Water can be used for many things and it can be used for many things. It can be used for many things and it can be used for many things. It can be used for many things and it can be used for many things.

THANK YOU FOR KEEPING OUR WASTEWATER SYSTEMS FUNCTIONING

As the city grows, it is important that the water be kept operational. The water is kept operational. The water is kept operational. The water is kept operational.
